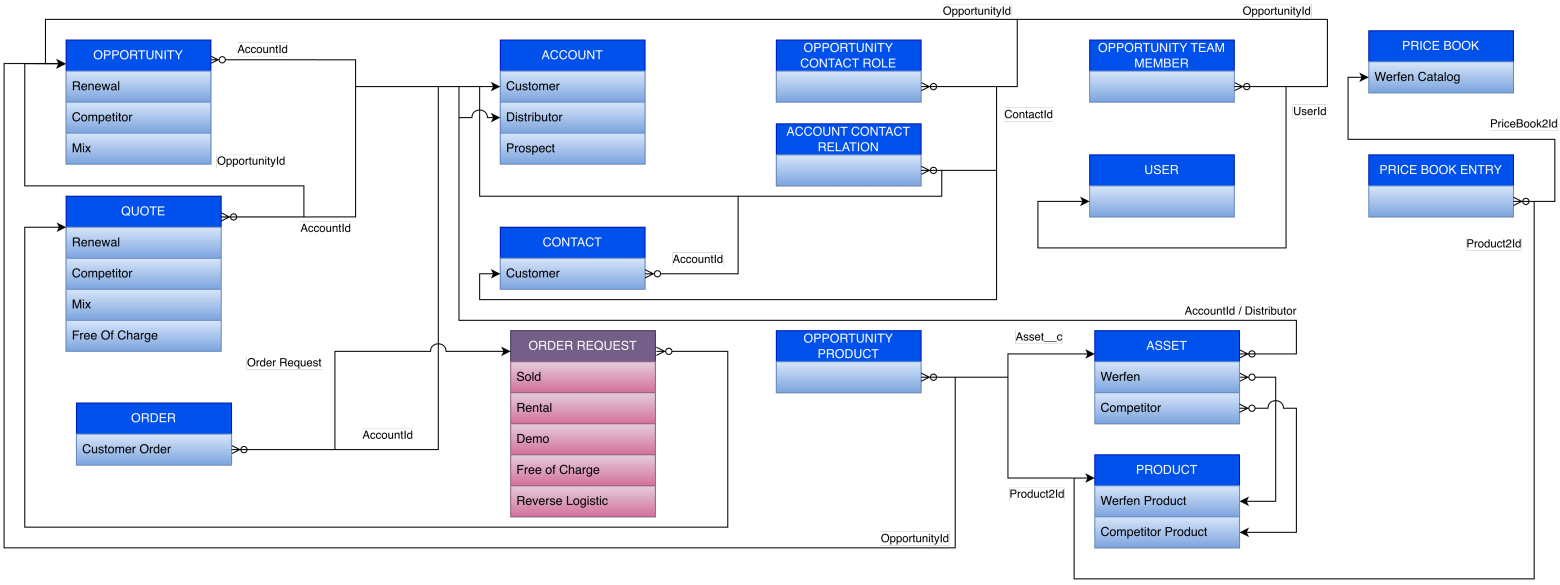
- Asset: Werfen and Competitor
- Account Landscape: Customer VoB
- Product2: Werfen Product, Competitor Product
  - Standard Fields Configuration
  - Custom Fields Configuration
- PriceBook2: Werfen Catalog



Asset: Werfen and Competitor

There will be two Record Types within the **Asset** object: **Werfen** and **Competitor**, allowing differentiation between Werfen instruments (synchronized into Salesforce through SAP integration) and competitor instruments (whose information may not be available, and therefore will be created manually by users).

The Asset records will be linked to the corresponding customer through the standard **AccountId** field. Other important fields include:

- **Company**: Picklist: Werfen (for Werfen RT) / Competitor (for Competitor RT)
- **Company Name**: The name of the corresponding competitor (only applies if the company value is Competitor) - Text
- **Business Unit** - global Picklist
- **Business Line** - global Picklist
- **Unit Revenues** - Double (16,2)
- **Units** - Double (18,0)
- **Total Revenues** - formula = Unit Revenues * Units
- **Model** - Text
- **SerialNumber** - Text
- **Material** - Text
- **Type** - Picklist: Test/Instrument
- **Distributor**: Instrument distributor (if applicable) - Account Lookup
- **Address**: Instrument address - Address Lookup
- **Product**: Standard Product Lookup

Account Landscape: Customer VoB

The **Account Landscape** (VoB) for Werfen and its competitors will be stored in a new custom object named **Account Landscape**. This approach enables us to receive Werfen-related information from SAP via integration, while allowing manual editing of the competitor-related values.

These records will be linked to the customer through a new custom field, **Account__c**.

Since it is necessary to define the competitor VoB values by business line, product, or test, users will be able to register this information in the **Asset** object. A **Trigger Flow** will then perform the required calculations to update the competitor VoB table values.

The calculation will be performed **each time** an Asset with the **Competitor** Record Type is **created or modified**, based on the business unit of the record.

				Werfen			Competitor		Total		Segmentation
BU	BU name	Business	#Instruments	Revenue	Mkt Share	Business	#Instruments	Revenue	#instruments	Revenue	
1	Blood Gas	Yes	from SAP	from SAP	%/total	Yes	report in SF	report in SF	sum	sum	Automatic-editable
2	Hemostasis	Yes	from SAP	from SAP	%/total	Yes	report in SF	report in SF			Automatic-editable
5	Autoimmunity	Yes	from SAP	from SAP	%/total	Yes	report in SF	report in SF			Automatic-editable
6	Serology	Yes	from SAP	from SAP	%/total	Yes	report in SF	report in SF			Automatic-editable
7	PBM	No	from SAP	from SAP	%/total	No	report in SF	report in SF			Automatic-editable
8	WBH	No	from SAP	from SAP	%/total	No	report in SF	report in SF			Automatic-editable
U	Transplant	No	from SAP	from SAP	%/total	No	report in SF	report in SF			Automatic-editable
T	Transfusion		from SAP	from SAP	%/total		report in SF	report in SF			Automatic-editable
ZSY	HITS		from SAP	from SAP	%/total		report in SF	report in SF			Automatic-editable
Z31	Clinical Chemistry		from SAP	from SAP	%/total		report in SF	report in SF			Automatic-editable

Some key fields of the new object include:

- **Customer** – Account Lookup
- **Business Unit**: we should have one record in the object for each business unit applicable to the customer - Global Picklist
- ~~**Business Line**: only apply for the "Other" Business Unit - Global Dependent multi-Picklist~~
- **Werfen Instruments**: read-only – Double (18,0)
- **Werfen Revenues**: read-only - Double (16,2)
- **Competitor Instruments**: editable and recalculated through the Asset Trigger Flow - Double (18,0)
- **Competitor Revenues**: editable and recalculated through the Asset Trigger Flow - Double (16,2)
- **Segmentation**: manually populated picklist PEGS Segmentation
- **Total Revenues** - formula = Competitor Revenues + Werfen Revenues - Double(16,2)
- **Total Instruments** - formula = Competitor Instruments + Werfen Instruments) - Double(18,0)
- **Market Share** - formula = (Werfen Revenues * 100)/Total Revenues - Percentage

For more details: Sales Strategy - Segmentation Tab

Product2: Werfen Product, Competitor Product

The standard **Product2** object will be provided with a specific record type for Werfen products and competitor products, which will serve as the main repository for all Werfen and competitor products for sale. To ensure data integrity, the Werfen product catalog will be systematically ingested and synchronized via integration with SAP, which will act as the authoritative System of Record (SoR).

Furthermore, the system architecture permits the manual creation of Competitor products. This capability is essential to allow competitive items to be instantiated as *OpportunityLineItem* records, granting full visibility of competitive placements directly within the Opportunity interface.

Standard Fields Configuration

- **Active (IsActive):** Boolean flag to control product availability.
- **External Id:** The unique identifier utilized for upsert operations during the SAP integration.
- **Product Code:** The standard Code identifier.
- **Product Family (Family):** Standard picklist. *Implementation Note:* Must be pre-populated with the official Werfen product families prior to the SAP data load.
- **Product Name:** The standard nomenclature of the item.

- **Product Description:** Detailed specifications or informational text.

Custom Fields Configuration

To extend the standard taxonomy and accurately map the organizational structure, the following custom fields and strict field dependencies will be implemented:

Field Label	Data Type	Architectural Notes & Constraints
Business Unit	Picklist	Backed by a Global Value Set. *Acts as the controlling field for Business Line*.
Business Line	Picklist	Backed by a Global Value Set. *Governed by a strict **Field Dependency** controlled by the selected Business Unit.*
Company	Picklist	**Value**: Werfen, Competitor
Company Name	Text	A standard text field explicitly indicating the specific name of the competitor manufacturer. Only if Company is set to Competitor value

PriceBook2: Werfen Catalog

To enable the transactional association of any product (Werfen or Competitor) to an Opportunity, a strict architectural prerequisite is its inclusion within the designated **Pricebook2** record, nominally identified as the **Werfen Catalog** name and with the **Werfen Catalog** Record Type.

- **Zero-Price Baseline:** All products will be established with a baseline **PricebookEntry** of $0.00.
- **Dynamic Pricing:** The actual transactional value (Sales Price) will either be manually defined by the user at the Opportunity level or automatically inherited from the corresponding Customer **Asset** record if accurately populated.
