Average Sales Management: Average Sales

To support automated **PEGS Segmentation** calculations, a new custom object, **Average Sales Management**, will be implemented. This object serves as a reference table for 12-month average sales data (Werfen vs. Competitors) and **will be maintained manually for each Business Unit** (BU).

Field Specifications:

- **Name:** Text. Automatically populated with the Business Unit name if left blank.
- **Business Unit:** Global Picklist.
- **Average Werfen Sales:** Double (16, 2).
- **Average Competitor Sales:** Double (16, 2).
- **External Id**: Unique external identifier used by MuleSoft/SAP to upsert records. Automatically populated with the Business Unit name if left blank to prevent duplicates

Flow to Automatically populated Name and/or externalId: **Average Sales - Auto Populate Fields**

A unique record validation must be enforced to ensure **only one record exists per Business Unit**.

Account Landscape (Segmentation Logic)

The **Account Landscape** object tracks performance at the Account level per BU. The **Segmentation** field (Global Picklist: *Sustain, Expand, Protect, Grow*) will be automatically calculated based on the reference values defined in the *Average Sales Management* table.

Calculation Matrix

The system will evaluate **Werfen Revenues** and **Competitor Revenues** against the corresponding BU averages on **Average Sales Management**:

Werfen Revenues	Competitor Revenues	Resulting Segmentation
< Average Werfen Sales	< Average Competitor Sales	**Sustain**
< Average Werfen Sales	> Average Competitor Sales	**Expand**
> Average Werfen Sales	< Average Competitor Sales	**Protect**
> Average Werfen Sales	> Average Competitor Sales	**Grow**

Automation Triggers & Overrides

The automated calculation will only execute if the **Manual Segmentation** checkbox is **FALSE**. If **TRUE**, the **user's manual entry takes precedence**.

The re-calculation logic shall be triggered under the following conditions:

1. **Manual-to-Auto Toggle:** When the **Manual Segmentation** field is changed from **TRUE** to **FALSE**. Functionality in the flow ***VoB Before Save Master***
2. **Reference Data Update:** When values in the **Average Sales Management** table are modified, the system must trigger a batch recalculation for all related **Account Landscape** records where **Manual Segmentation** is **FALSE**. Functionality in the flow ***Average Sales Update Segmentation***
3. **Revenue Update:** When **Werfen Revenues** or **Competitor Revenues** are updated on a **Account Landscape** record (provided manual override is disabled). Functionality in the flow ***VoB Before Save Master***

The calculations will always be performed for the records of the same business unit
