Opportunity: Renewal, Competitive, Mix

Opportunities will be persisted within the standard **Opportunity** object and established within the data model via a standard lookup relationship to the customer *AccountId*. Furthermore, a strict architectural constraint mandates that each Opportunity record must be singularly associated with one Business Unit (1:1 relationship) using the new custom field created for this purpose.

Opportunity Record Types

To accommodate distinct business workflows, the Opportunity object will be configured with three dedicated Record Types. Despite these functional distinctions, **all Record Types will leverage a unified Opportunity Stage lifecycle**.

- **Renewal:** Provisioned for standard renewal operations.

- **Competitive:** Provisioned for competitive engagement scenarios.

- **Mix:** A hybrid Record Type designated for complex opportunities that simultaneously encompass both renewal and competitive operations.

Opportunity Sharing and Visibility

To accommodate Werfen's complex data matrix, the Organization-Wide Default (OWD) sharing setting for the **Opportunity** object will be strictly configured as **Private**.
Visibility and collaborative access will be dynamically provisioned through the **Opportunity Team Member** object. To determine eligibility, the system will utilize automated flows to enforce an **intersection-based sharing logic**.

Specifically, a user will only be granted access to an Opportunity if they satisfy two concurrent criteria:

1. They are aligned with the parent Account's geographic territory (identified via the **Account Team Member** or territory association).

2. They are active members of the specific **Public Group** corresponding to the Opportunity's designated **Business Unit**.

Only users existing at the intersection of both criteria will be automatically added to the Opportunity Team, ensuring tight compliance with the matrix visibility matrix.

Standard Fields Configuration

The following standard fields will be utilized and configured to support the baseline opportunity data requirements:

- **Account:** The target customer related to the opportunity. The opportunity must be associated with a Sold To or Distributor type customer
- **Stage:** Defines the current phase within the sales pipeline.
- **Status:** A dependent value driven by the selected Opportunity Stage.
- **Type:** A picklist governed by strict Field Dependencies based on the active Record Type:
  - **Renewal Record Type:** Restricted to the **Renewal** value.
  - **Competitive Record Type:** Restricted to the **Competitive** and **New/Incremental** values.
  - **Mix Record Type:** Restricted to the **Mix** value.
- **Closed Date**: System & Audit Field
- **Created Date**: System & Audit Field
- **Last Modified Date**: System & Audit Field
- **Created By**: System & Audit Field
- **Last Modified By**: System & Audit Field

Custom Fields Configuration

The following custom fields are required to extend the standard data model and capture specific business metrics:

Field	Data Type	Notes
Distributor	Account Lookup	Must include a lookup filter to strictly restrict selection to Accounts holding the **Distributor** Record Type.
Success	Picklist	**Values:** 20%, 40%, 60, 80%. Implemented as a custom, standalone picklist rather than utilizing the standard Probability field, ensuring this metric remains fully decoupled and independent from the Opportunity Stage.
Estimated Closing Date	Date	To capture the anticipated closure timeline.
Estimated Installation Date	Date	To capture the projected installation timeline.
Contract Length (Years)	Double (16,2)	Conditionally auto-populated mapped from the associated **Contract** record, provided a related contract exists on the Opportunity.
Business Unit	Picklist	Restricted to a single selection and backed by a Global Value Set.
Business Model	Multi-Select Picklist	**Values:** Cash, Reagents, Service, Rental.
~~**Business Line**~~	~~Picklist~~	~~only apply for the "Other" Business Unit - Global Dependent Multi-Picklist~~
Werfen Affected Business	Checkbox	Automatically evaluated and set to **True** if any related **Opportunity Product** corresponds to an affected **Werfen Asset**.
Competitive Affected Business	Checkbox	Automatically evaluated and set to **True** if any related **Opportunity Product** corresponds to an affected **Competitor Asset**
Assigned Rep	User Lookup	Auto-populated based on the assigned User in the **Account Business Unit** data table *(evaluated by matching the Opportunity's AccountId and Business Unit)*. System design permits manual override by the user post-creation.
Annual Competitive Revenue	Roll-Up Summary	All records from OpportunityLineItem that comply: `Affected == TRUE AND Placement Type == 'Competitive' AND Company == 'Werfen'`
Annual New/Incremental Revenue	Roll-Up Summary	All records from OpportunityLineItem that comply: `Affected == TRUE AND Placement Type == 'New/Incremental' AND Company == 'Werfen'`
Annual Renewal Revenue	Roll-Up Summary	All records from OpportunityLineItem that comply: `Affected == TRUE AND Placement Type == 'Renewal' AND Company == 'Werfen'`
Annual Revenue	Formula Double (16,2)	**Value**: Annual Competitive Revenue + Annual Renewal Revenue + Annual New/Incremental Revenue

Field	Data Type	Notes
Total Revenue	Formula Double (16,2)	**Value**: Annual Revenue * Contract Length (Years)
Annual Won Competitive Revenue	Roll-Up Summary	Total Revenue from each Competitive Opportunity Product Won `Affected == TRUE AND Placement Type == 'Competitive' AND Company == 'Werfen' AND Status=='Won'`
Annual Won New/Incremental Revenue	Roll-Up Summary	Total Revenue from each New/Incremental Opportunity Product Won `Affected == TRUE AND Placement Type == 'New/Incremental' AND Company == 'Werfen' AND Status=='Won'`
Annual Won Renewal Revenue	Roll-Up Summary	Total Revenue from each Renewal Opportunity Product Won `Affected == TRUE AND Placement Type == 'Renewal' AND Company == 'Werfen' AND Status=='Won'`
Annual Won Revenue	Formula Double (16,2)	**Value**: Annual Won Competitive Revenue + Annual Won Renewal Revenue + Annual Won New/Incremental Revenue
Total Won Revenue	Formula Double (16,2)	**Value**: Annual Won Revenue * Contract Length (Years)
Nº Renewal Placement Type	Roll-Up Summary	**Value**: Nº Renewal Affected Opportunity Product `Affected == TRUE AND Placement Type == 'Renewal' AND Company == 'Werfen'`
Nº Competitive Placement Type	Roll-Up Summary	**Value**: Nº Competitive Affected Opportunity Product `Affected == TRUE AND Placement Type == 'Competitive' AND Company == 'Werfen'`
Nº Incremental Placement Type	Roll-Up Summary	**Value**: Nº Incremental Affected Opportunity Product `Affected == TRUE AND Placement Type == 'New/Incremental' AND Company == 'Werfen'`
Nº Affected Placement Type	Formula Percentage	**Value**: `Nº Competitive Placement Type + Nº Renewal Placement Type + Nº Incremental Placement Type`
Renewal Placement Type	Formula Percentage	**Value**: Nº Renewal Affected Opportunity Product * 100 / Nº Total Opportunity Product
Competitive Placement Type	Formula Percentage	**Value**: Nº Competitive Affected Opportunity Product * 100 / Nº Total Opportunity Product
New/Incremental Placement Type	Formula Percentage	**Value**: Nº Incremental Affected Opportunity Product * 100 / Nº Total Opportunity Product
Has KDM Contact	Checkbox	Automatically evaluated and set to **True** if any related **Opportunity Contact Role** corresponds to an KDM role.
Account Business Unit	Account Business Unit Lookup	A system-level relational field designed to link the Opportunity with the corresponding **Account Business Unit** record of the parent Account. This linkage explicitly identifies the Business Potential for the designated Account Business Unit, thereby streamlining reporting analytics and enabling the enforcement of

Field	Data Type	Notes
		complex validation rules. It is intended to remain hidden from the standard page layouts.
Opportunity Group	Lookup (Opportunity Group)	Link to Opportunity Group record. This model allows for a "Schema" where one central "Global Tender" Opportunity can be the parent to multiple individual local Opportunities via this grouping object.
Closed Reason	Single Picklist	Values: *Brand loyalty, Features, Menu, Price*. It is recommended to enforce a Validation Rule or Field Dependency ensuring this field is only accessible and strictly required when the item's Status is updated to Lost or Cancelled

Nº Renewal Affected Opportunity Product = All records from OpportunityLineItem that comply: `Affected == TRUE AND Placement Type == 'Renewal'`
Nº Competitive Affected Opportunity Product = All records from OpportunityLineItem that comply: `Affected == TRUE AND Placement Type == 'Competitive'`
Nº Incremental Affected Opportunity Product = All records from OpportunityLineItem that comply: `Affected == TRUE AND Placement Type == 'New/Incremental'`
Has KDM Contact **Opportunity Contact Role Trigger** and **Opportunity Contact Role Delete Trigger** update the value of this field automatically.

Opportunity Layout

The **Opportunity** object layout will be structured into functional sections to optimize the user experience and data entry flow. The following schema defines the distribution of standard and custom fields:

Account Information Section

- **Account:** Standard Lookup (Account)
- **Distributor:** Custom Lookup (Account)

Tracker Section

This section monitors the commercial lifecycle and key implementation milestones.

- **Estimated Closing Date:** Custom (Date)
- **Closed Date:** Standard (Date)
- **Estimated Installation Date:** Custom (Date)
- **Contract Length (Years):** Custom (Number)
- **Created By:** Standard (Audit Field)
- **Creation Date:** Standard (Audit Field)
- **Last Modified By:** Standard (Audit Field)
- **Last Modified Date:** Standard (Audit Field)

Funnel Section

Focused on sales pipeline health and progression.

- **Status:** Standard (Picklist)
- **Stage:** Standard (Picklist/Path)
- **% Success:** Custom (Percent)

Business Section

Captures the commercial scope and financial impact of the opportunity.

- **Business Unit:** Custom (Global Picklist)
- **Opportunity Type:** Standard (Picklist)
- **Business Model:** Custom (Picklist)
- **Werfen Affected Business:** Custom (Currency/Number)
- **Competitive Affected Business:** Custom (Currency/Number)
- **Total Revenue:** Custom (Formula/Currency)
- **Assigned Rep:** Custom Lookup (User)

Opportunity Funnel Stage

The Opportunity pipeline lifecycle is governed by a strictly defined Funnel Stage model. To ensure accurate forecasting, reporting, and pipeline management, the granular sales stages are categorically mapped to overarching operational phases.

The system will enforce the following stage hierarchy and picklist values:

Status	Stage Values
Open	Universe, Above the Funnel, In the Funnel, Best Few
Pending Contract	Maintain Previous
Booking	Pending Installation, Pending Go Live
Live	Live
Canceled	Canceled
Closed	Won, Lost, Mix

Stage Validations

To enforce data quality and ensure adherence to the established sales methodology, the system will implement strict stage progression constraints. These validation rules act as gatekeepers, preventing users from advancing the Opportunity **Stage** until specific business criteria are met.

Funnel Stage	Business Rule	Implementation Strategy
Above the Funnel	The Opportunity cannot progress if the associated Account is not yet validated (it is still classified as a Prospect).	**Cross-Object Validation Rule:** Evaluates the parent Account record. The rule will trigger an error if **StageName** is changed to 'Above the Funnel' (or further) while **Account.RecordType.DeveloperName** (or the equivalent Account Status field) equals **Prospect**.
In the Funnel	The Opportunity cannot progress unless associated Opportunity Products containing valid revenue figures have been added to the record.	**Standard Flag & Roll-Up Summary Validation:** The validation rule will evaluate the standard **HasOpportunityLineItem** system checkbox (evaluating to **True**) to ensure products exist. Additionally, it will verify that the aggregated revenue (utilizing the standard **Amount** field or a custom Roll-Up Summary such as **Annual Revenue**) is strictly greater than zero prior to permitting stage progression.
Best Few	The Opportunity cannot progress unless a Key Decision Maker (KDM) has been identified and associated with the Opportunity.	**Flow & Validation Rule Hybrid:** Standard validation rules cannot query the **Opportunity Contact Role** object directly. Therefore, a Record-Triggered Flow will be implemented to automatically toggle a hidden **Has KDM Contact** checkbox on the Opportunity whenever a Contact Role with the 'KDM' designation is added or removed. The Validation Rule will strictly evaluate this checkbox when the stage shifts to **Best Few**.

Opportunity Group: Opportunity Group

The **Opportunity Group** custom object with "Opportunity Group" RecordType facilitates the creation of peer-to-peer or hierarchical relationships between independent Opportunity records. This is essential for managing complex agreements that span multiple business units or global regions.

Field Specifications:

Field Label	Data Type	Logic / Functional Behavior
Name	Text	Name identifier for the group (e.g., "Global Tender 2024 - Spain").
Primary Opportunity	Master-Detail (Opportunity)	The "Parent" record. Governs security and visibility (Inherited).
Relationship Type	Picklist (Manually)	*Values: Global Tender, Multi-BU*

Relationship Logic: Primary vs. Member

The architecture uses a **Hybrid Relationship Model** to manage the lifecycle of the group:

1. **The Primary Record (Master-Detail):**
   - The **Opportunity Group** object contains a Master-Detail field pointing to the **Primary Opportunity**.
   - **Impact:** The Group record's visibility and deletion are tied to this specific Opportunity. If the Primary Opportunity is deleted, the Group container is removed.
2. **Member Records (Lookup):**
   - Any other Opportunity can join the group by populating its **Opportunity Group** lookup field.
   - **Impact:** This allows for a **1:N (One-to-Many)** relationship where one Group record can aggregate dozens of related opportunities.

- This field will also be **automatically filled** in for the Opportunity considered **Primary Opportunity** with the generated Opportunity Group record

Validation Rules & Data Integrity

To maintain a clean data model, the following validation logic will be implemented:

- **Unique Group Name:** A standard unique constraint on the **Name** field to prevent duplicate group entities.
- **Primary Opportunity Uniqueness:** A validation rule or unique constraint to ensure a single **Primary Opportunity** is not assigned to multiple **Opportunity Groups** simultaneously.

Architectural Insight:

- **Global Visibility**: model is particularly powerful for International Affiliates. A "Global Account Manager" can own the Opportunity Group, while local "Account Managers" own their individual Member Opportunities. Because of the Master-Detail relationship, the Global Manager maintains visibility over the entire group's status without needing manual sharing rules.
- **Complex Tenders**: This model allows for a "Schema" where one central "Global Tender" Opportunity can be the parent to multiple individual local Opportunities via this grouping object.
- **Security Inheritance**: Using a Master-Detail relationship on the Primary Opportunity ensures that any user who can see the main deal can also see the grouped relationship. However, users must have at least "Read" access to the Related Opportunity to see its details.

Opportunity Product

To effectively provision **Opportunity Products** and ensure correct configuration across diverse sales scenarios (Renewal, Competitive, and Mix), the standard `OpportunityLineItem` object requires specific functional extensions.

More Details: [Opportunity Product Management]

Opportunity Contact Role and Opportunity Team Member

Salesforce standard objects will be used to manage both the customer stakeholders involved in the deal **Opportunity Contact Role** and the internal extended sales team **Opportunity Team Member**.

Opportunity Contact Role

To provide sales users with a comprehensive view of the decision-making unit within the **Opportunity Related List**, the **Opportunity Contact Role** object will be enhanced with additional custom fields. These fields will facilitate better stakeholder mapping and ensure data privacy visibility during the negotiation process.

Field Specifications:

- **Buying Influence:** Picklist (Values: *High, Medium, Low*). This field identifies the specific influence type of each contact within the opportunity. The system will retrieve the value from the **Contact Segmentation** table associated with the selected Contact. The query must be filtered to match the **Business Unit (BU)** defined at the Opportunity level. However, it can be manually modified by the user.
- **Consent Status:** Technical Formula Field (Text). This field dynamically retrieves the global privacy status from the Contact related **Individual** record: `BLANKVALUE(Contact.Individual.WERFEN_fld_consentStatus__c, "OptOut")`

UI Configuration: Opportunity Layout

The following fields (standard and custom) will be exposed in the **Opportunity Contact Role** related list on the Opportunity Page Layout:

1. **Contact** (Standard)
2. **Role** (Standard)
3. **Buying Influence** (Custom)
4. **Consent Status** (Custom Formula)

Quote: Competitive, Renewal and Mix

Multiple Quotes must be created under the same Opportunity, allowing users to review and compare them until a single Quote is marked as the winner. To support different layouts, commercial conditions, approval flows, validations, and/or automation logic, three Record Types will be used: **Competitive**, **Renewal**, and **Mix** depending on whether the originating Opportunity is of type **Competitive** , **Renewal** or **Mix**.

Additionally, the Record Type **Free Of Charge** will also be available for the management of demos and returns: Instruments and FoC Request

Order Request: Sold, Rental, Demo, Free of Charge, Reverse Logistic

Once a Quote has been confirmed, approved, and validated, a new record could be generated in the custom object **Order Request**. These records will be synchronized with SAP, which is the system responsible for confirming orders.

After an order is confirmed in SAP, it will be sent back to Salesforce through an integration interface as an **Order**, including the relationship to the originating **Order Request** (when applicable and when the order was not created directly in SAP).

Further details regarding the **Order Request** object and the various types of requests that can be generated will be provided in its corresponding section.
