## Territory Management

To address Werfen's business requirements, the solution will model five territory tiers using Salesforce Enterprise Territory Management (ETM). A distinct `Territory2Type` will be established for each level in the hierarchy: Global,

Sales Org, Sales Area, Sales Region, and Sales Subregion. This structure guarantees that an Account located in a lower-tier territory rolls up visibility to all users assigned to that level and any superior levels.

### Territory2Type

A **Territory2Type** will be created for each level:

```
Global
 └── Sales Org
      └── Sales Area
            └── Sales Region
                  └── Sales Subregion
```

### Account Visibility

The Account Organization-Wide Default (OWD) will be set to **Private**. Visibility is dynamically and natively granted via **Standard ETM Assignment Rules** (eliminating the need for custom Flow triggers). When an Account is created or updated and meets the defined criteria, it is automatically assigned to the correct territory node. Consequently, users assigned to that territory (and those above them in the hierarchy) will automatically gain access to the Account.

### Open Visibility & Matrix-Based Edit Control

To maximize system performance and foster collaboration, the architecture utilizes an **"Open Read, Restricted Edit"** model for Account-related objects (e.g., Opportunities, Contacts, Cases).

- **Read Access (Open):** Having visibility over an Account through the territory automatically allows the user to see all the Opportunities, Contacts, and other related records for that Account. This provides a holistic 360-degree view of the customer.
- **Edit Access (Sales Team-Controlled):** While visibility is open, the ability to *modify* records is strictly governed by the **Sales Team** table of the related Account. This Sales Team is defined at the **Business Line / Busisness Unit** level. Users can only edit or manage records if they are recognized members of the Account's Sales Team for that specific Business Line. This is enforced via:
    - **Validation Rules / System Controls:** Database-level controls that block save actions if the user does not belong to the correct Sales Team for the record's Business Line.
    - **Dynamic Forms & Custom Permissions:** UI-level configurations that hide "Edit" buttons and editable fields for users who are not part of the designated Sales Team, preventing user frustration.

This optimized structure successfully covers operational needs securely and directly via Account relationships, without overcomplicating the backend data model:

- Management of a specific Business Line based on direct Account Sales Team assignment.
- Clear separation of duties across multiple Business Lines within the same Account.

### Territory Values

*Final list of Territories pending confirmation*

### Global

- **Werfen ES**
    - Atlántica
    - Central
        - General Area
    - Centro
        - Madrid
        - Zaragoza

    - Este
        - Catalunya
            - Barcelona
        - Murcia
        - Palma
        - Valencia
    - Norte
        - Bilbao
        - Gijon
        - Santiago
    - Sur
        - Las Palmas
        - Málaga / Granada
        - Sevilla
        - Tenerife
- **Werfen PT**
    - Atlántica
- **Werfen UK**
    - Werfen UK Domestic
        - ABSEK
        - Central
        - East
        - Intercompany
        - North
        - North & Scotland
        - North East
        - North North West
        - North West
        - South
        - South East
        - South East East
        - South West
        - West
- **Werfen US**

These territories are configured entirely within Salesforce and **do not integrate with SAP**. The solution has been intentionally simplified for Salesforce operations, as SAP uses multiple tables that would overly complicate the model.

### Business Unit and Business Line values

The different values required for each business unit and/or business line can be obtained in the corresponding section within "Global Picklist": Business Unit and Business Line
